

The Georgia Ag Forecast is an annual seminar series presented by the University of Georgia (UGA) College of Agricultural and Environmental Sciences in five cities across the state offering insight into the next year's agricultural economy. Established in 2011, this annual seminar series is attended by approximately 750 participants each year across the state of Georgia and provides guidance for farmers and agribusiness professionals to predict markets and prepare for the next growing season while providing a networking opportunity with other agriculture professionals.

UGA, the state's land-grant and flagship institution, is committed to sharing the latest research and information to help Georgia farmers and agribusinesses. Each year, economists from the College of Agricultural and Environmental Sciences provide an outlook of agricultural markets, though out the state of Georgia, for the coming year. At each Ag Forecast seminar, participants network with UGA faculty and UGA Cooperative Extension agents, local producers and other stakeholders. Participants leave with a greater knowledge of agricultural market trends and access to the digital Georgia Ag Forecast publication, which is designed to provide detailed analyses of major commodities produced in the state.

DATE	CITY	LOCATION
January 21, 2020	Macon	Georgia Farm Bureau Building
January 23, 2020	Gainesville	Jaemor Farms
